Part 5

The screenshot shows a code editor with a file named `main.py` open. The code defines a `main()` function that prints information about benchmark prices and instrument prices. Below the code editor, a terminal window shows the execution of the script, displaying the output of the `main()` function.

```
src > main.py
33 def main():
59     print(f"{benchmark['ticker']}: {len(benchmark_prices)}")
60     print(get_first_close(instrument_prices))
61     print(get_last_close(instrument_prices))
62
63     print(get_first_close(benchmark_prices))
64     print(get_last_close(benchmark_prices))
65 if __name__ == "__main__":
66     main()
67
```

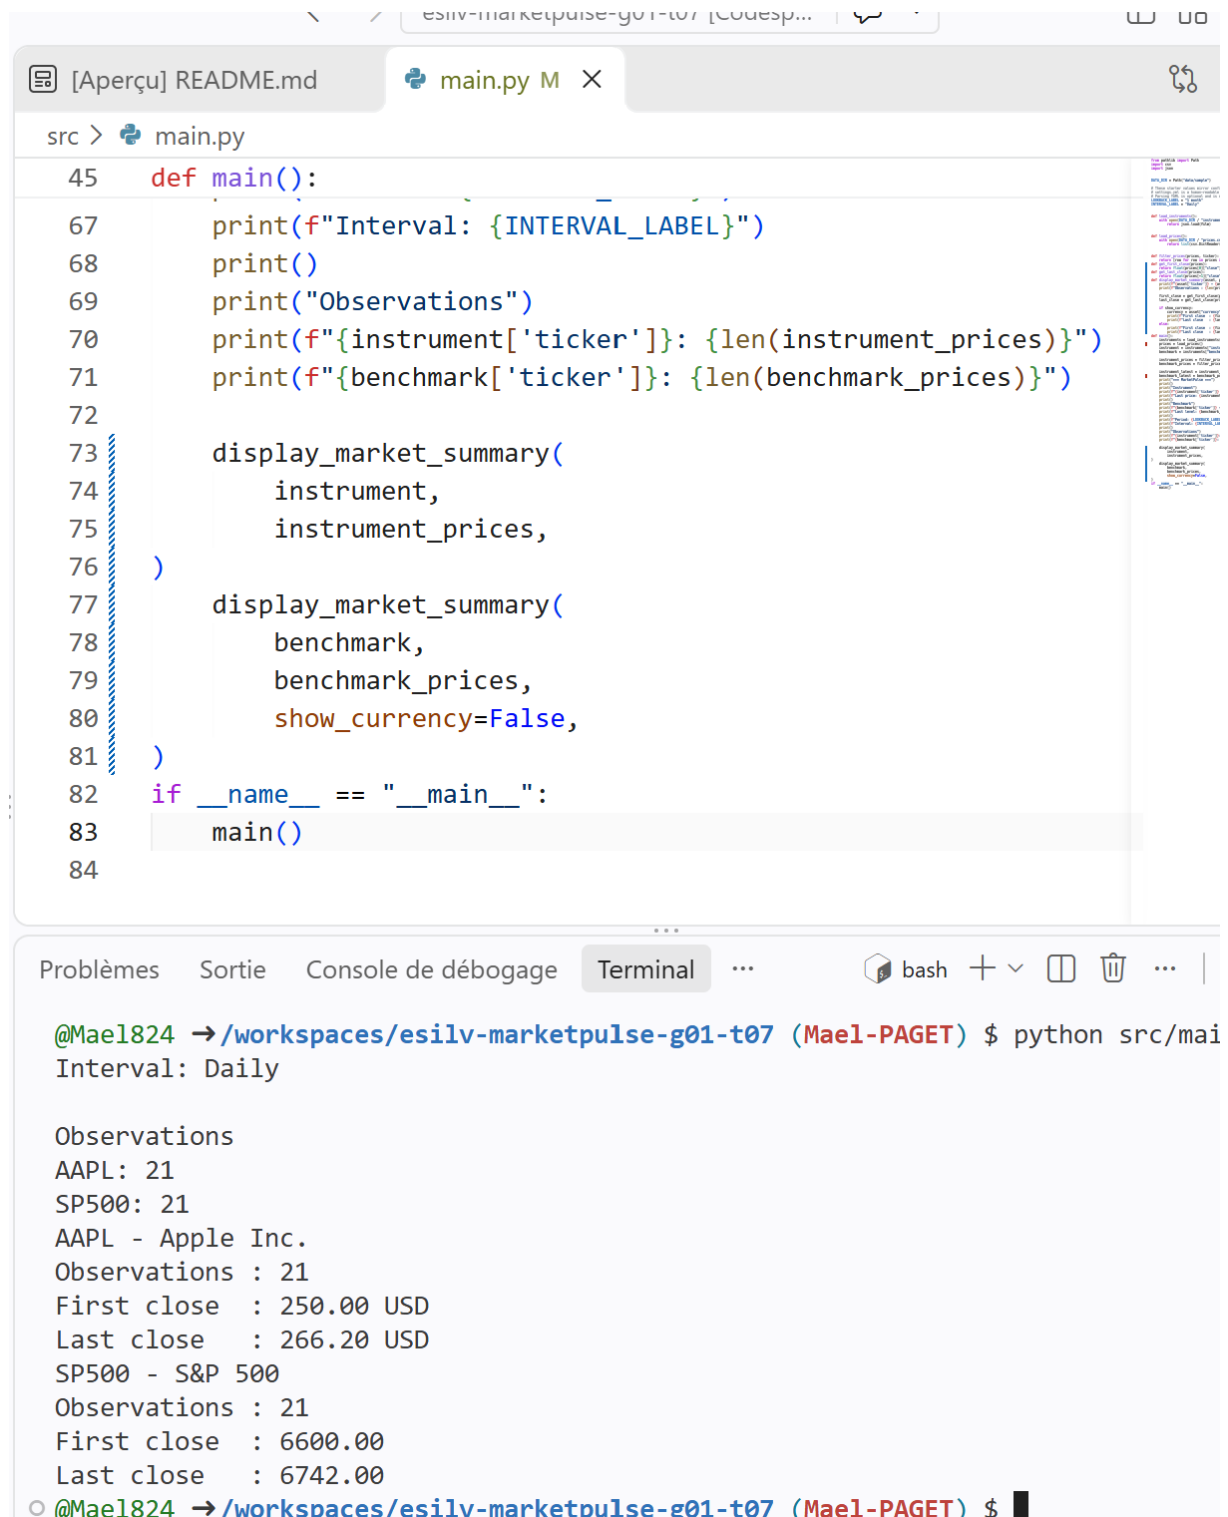

Terminal output:

```
@Mael1824 → /workspaces/esilv-marketpulse-g01-t07 (Mael-PAGET) $ python src/main.py
SP500 - S&P 500
Last level: 6742.00

Period: 1 month
Interval: Daily

Observations
AAPL: 21
SP500: 21
250.0
266.2
6600.0
6742.0
```

Part 6

The screenshot shows a code editor with a file named `main.py` open. The code defines a `main()` function that prints the interval, observations, and instrument/benchmark prices. It also calls `display_market_summary` for both the instrument and benchmark. The terminal below shows the execution of `python src/main.py`, which outputs the interval as 'Daily' and displays market summaries for AAPL and SP500.

```
src > main.py
45 def main():
67     print(f"Interval: {INTERVAL_LABEL}")
68     print()
69     print("Observations")
70     print(f"{instrument['ticker']}: {len(instrument_prices)}")
71     print(f"{benchmark['ticker']}: {len(benchmark_prices)}")
72
73     display_market_summary(
74         instrument,
75         instrument_prices,
76     )
77     display_market_summary(
78         benchmark,
79         benchmark_prices,
80         show_currency=False,
81     )
82 if __name__ == "__main__":
83     main()
84
```

Terminal Output:

```
@Mael1824 →/workspaces/esilv-marketspulse-g01-t07 (Mael-PAGET) $ python src/main.py
Interval: Daily

Observations
