TD3

Part 3:

Git status: shows which files were modified since the last commit

```
@adja07 ➜ /workspaces/esilv-marketpulse-g01-t07 (adjasy) $ git status
On branch adjasy
Your branch is up to date with 'origin/adjasy'.

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   src/main.py
```

Git diff: shows changes

```
@adja07 ➜ /workspaces/esilv-marketpulse-g01-t07 (adjasy) $ git diff
diff --git a/src/main.py b/src/main.py
index 884b045..faf05af 100644

     print(f"{instrument['ticker']} - {instrument['name']}")
```

1. Which files are modified?
   Only src/main.py was modified.
2. Which lines were added?
   Three functions were added: get_first_close("prices"), get_last_close("prices") and display_market_summary(assert, prices, show_currency=True)

3. Which lines were removed?
   No lines were removed after the lest commit

4. Does the diff match the work you intended?
   Yes, the changes correspond to the changes in theTD2

5. Is there temporary debugging output that should be removed before committing?

> No there is not a temporary debugging output that should be removed before committing.

Part 4

`git status --short`: Shows the same information then git status but in a shorter format.

Modified (M): An existing file has been changed.

Untracked (??): A new file that Git doesn't track yet.

Staged: Changes that are ready to be committed.

Part 5

Difference between git diff and git diff –staged

`git diff` shows changes that have not been staged yet.

`git diff --staged` shows changes that have been added to the staging area and are ready to be committed.

Part 6

```

1. which files changed;
   The file src/main.py was changed
2. what the diff represents;
   The diff shows the changes made to the Python code, including the addition of functions to retrieve the first and last closing prices and display a market summary.
3. why the commit message is appropriate;
   The message `Add market summary modifications from TD2` is appropriate because it clearly describes the modifications made during TD02.
4. who is recorded as the author.
   The author is the Git user: adja07

1. Which change exists on the feature branch?

The feature branch contains new functions to display the first and last observation dates in MarketPulse.

2. Why is that change not yet part of `main`?

Because the feature branch has not been merged into `main` yet.

3. What would happen if the branch were abandoned before merge?

The changes would not be included in `main` and could be lost if the branch were deleted

Part 7

Last level: 6742.00

Period: 1 month
Interval: Daily

Observations
```

1. Is the feature now visible from `main`?
Yes, the feature is now part of `main`, and MarketPulse displays the first and last observation dates.
2. Is the feature commit still visible?
Yes, the commit c974334 is still visible in the Git history.
3. Did Git perform a fast-forward or create a merge commit?
Git performed a fast-forward merge. No new merge commit was created.
4. What does the graph show?
The graph shows that `main` and `feature/display-observation-dates` point to the same commit, meaning the feature was successfully merged.
